

True vs Mean Node

Here are some examples to see differences between true node and mean node. Here I use, except last two pages, harmonic 64. I am very sure that the node plays a big role in the marriage, therefore I use marriage event.

Of course, the node also play a big role in the other events, eg. Suicide, friendship or blood relationship, freedom deprivation, being released from jail, various mental and physical illnesses or sprit development and reincarnation. But these areas have not been enough (or not at all) researched in astrology.

Used :

1-Sidereal zodiac (Krishnamurti Ayanamsa),
23°45'56" for Year 2000. Speed of precession is 50.2388475.

2-Progressions Keys :

Secondary Progression : 1 sidereal day = 1 sidereal year

Rate : $0.99726966 / 365.25636042 = .002730327978008$

3-Transit, Solar, Lunar, Progressed Lunar

4- Harmonic 64 (5° 37' 30'')

Zet Settings :

a sidereal day (23h 56m 4.091s)

a sidereal month (27d 7h 43m 11.47s)

a sidereal year (365d 6h 9m 9.5s)

Note : In some examples, the values 1° 24' 22'' and 2° 48' 45'' subtracted because they are exact harmonic points, like 90° or 180°.

I would like to show here with other technique why mean node is the right one.

From the inside to the outside :

1. inner circle (1) : Meghan Markle's natal
2. inner circle (2) : Meghan Markle's progression
3. inner circle (3) : Prince Harry's natal
4. outer circle (4) : Prince Harry's progression

Secondary Converse Harmonic 64 (Mean Node)

(4) Prince Harry's $[\text{♀ p}/\text{♂ p} = \text{♁ p}] = (1) \text{ Meghan Markle's } \text{♁ n}$

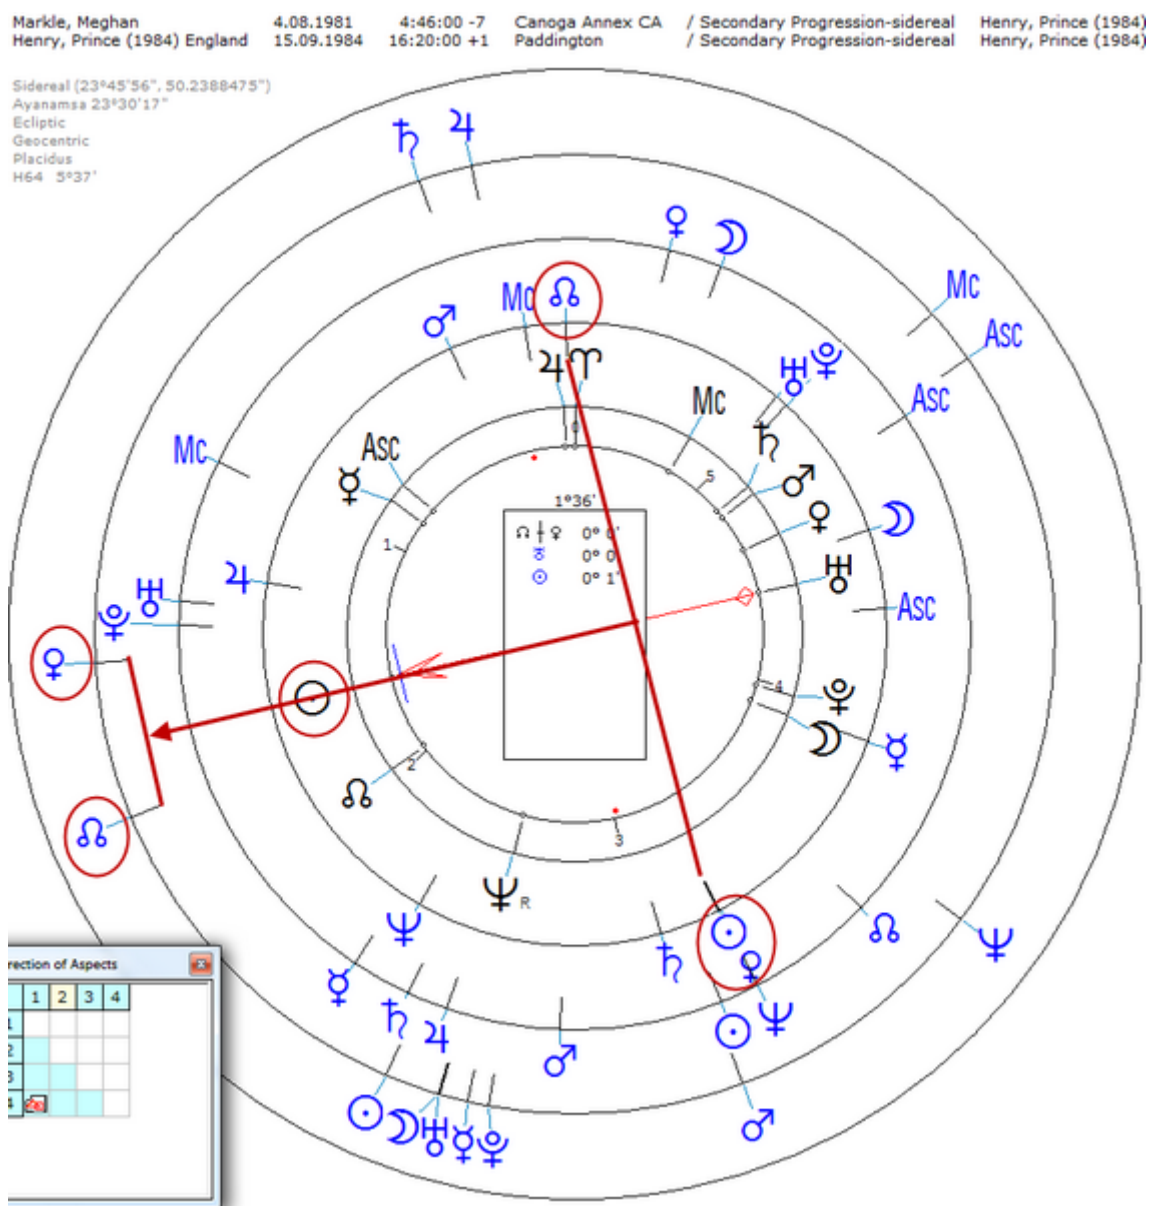

1. inner circle (1) : Meghan Markle's natal
2. inner circle (2) : Meghan Markle's progression
3. inner circle (3) : Prince Harry's natal
4. outer circle (4) : Prince Harry's progression

Secondary Harmonic 64 (Mean Node)

(2) Meghan Markle's $[\text{♀}_p/\text{♂}_p = \text{☉}_p/\text{♂}_p] = (4)$ Prince Harry's $[\text{♀}_p/\text{♂}_p] = (1)$ Meghan Markle's ☉_n

The equations shown on the last three pages are with true node not possible.

William, Duke of Cambridge
